The OFFICIAL **WIGGA-METER**

Cloudy Skies Research Institute

A conceptual framework designed to quantify and analyze the *WiggerFactor*: a probabilistic metric assessing the likelihood of encountering individuals exhibiting Wigger-like traits and behaviors based on environmental and occupational factors.

How it works

The **WIGGA-METER** employs a standardized 1-25 scale to quantify the relative intensity of the *WiggerFactor* in observable subjects. Each categorical data point gets a max of 5 points with a 6 point bonus for extremely common factors.

Approximately 30 jobs/locations were studied.

This presentation will begin at Number 5 and systematically advance to Level 1, denoting a near 100% encounter rate given being within the defined parameters.

P R E M I U M
BACKGROUND

Data Points

- **NWAL (Natural Wigger Appearance Likelihood)**
 - Quantifies the likelihood of an organic encounter in a public setting.
- **WEC (Wigger Employment Chance)**
 - Quantifies the likelihood of a wigger individual being employed within or affiliated with the specified occupation or setting.
- **BSA (Bluetooth Speaker Allowance)**
 - Measures the social and situational tolerance for an individual to play music publicly via a portable Bluetooth speaker within the specified setting.
- **FFP (Free Food/Drink Probability)**
 - Estimates the likelihood of complimentary consumables at a given location, which correspondingly elevates the probability of wigger presence and encounter frequency.
- **SB (Stereotype Bonus)**
 - Assigns additional weight to locations that reinforce or align with established wigger stereotypes.

What is a Wigger?

A “wigger” is a suburban white individual who adopts the aesthetic of urban rap culture, often identifying with cities like the Bronx or Atlanta based solely on lyrical exposure.

Typically dressed in baggy jeans or sweatpants, a DIY Tupac or THUG LIFE shirt, and a fake chain from Temu, they broadcast “real music” through Bluetooth speakers and recently supplemented with a few trending female tracks to appear balanced. The specimen functions more as performative cosplay of a commodified “gang” identity, often emerging from unstable family backgrounds and characterized by chronic underemployment, the worst fits of all time, and poor dental hygiene.

Cloudy Skies Research Institute

Examples of Exemplary Wiggers

- Eminem
- Travis Kelce
- Mark Wahlburg
- Channing Tatum
- Riff Raff
- Chet Hanks
- Iggy Azalea
- Post 2012 Justin Bieber
- Elvis Presley (Godfather of the Wigs)

Thank you watching my presentation!

Official Wigga-Meter Metrics

A multi-dimensional scoring metric was applied to extensive field and contextual data to determine the probabilistic distribution of stereotypical 'wigger' individuals in real-world settings.

■ WiggerFactor

Bold values highlight the locations with the highest probability of wigger presence.
